Test Document — Page 1

Accent color #1

This is page one of the ten-page test document. Each page has a unique accent color so that operations like Rotate, Reorder, Split, and Delete Pages can be visually verified.

Test Document — Page 2

Accent color #2

Page two. The same layout is used for every page; only the page number, color stripe, and body text differ.

Test Document — Page 3

Accent color #3

Page three. If a rotation operation is applied to this PDF, every page should rotate by the same angle.

Test Document — Page 4

Accent color #4

Page four. For Split operations, the test will request a specific range (e.g. '1-3') and verify the output contains only the requested pages.

Test Document — Page 5

Accent color #5

Page five. For Reorder operations, the test will specify a new page order and verify the output matches.

Test Document — Page 6

Accent color #6

Page six. For Delete Pages, the test will remove specific pages and confirm the remaining pages are in the correct sequence.

Test Document — Page 7

Accent color #7

Page seven. For Watermark operations, the test will apply a diagonal watermark and verify it appears on every page.

Test Document — Page 8

Accent color #8

Page eight. For Header/Footer operations, the test will add a header line and verify it appears at the top of every page.

Test Document — Page 9

Accent color #9

Page nine. For OCR operations, this text provides a sample that Tesseract.js should recognize accurately.

Test Document — Page 10

Accent color #10

Page ten. The final page. For Merge operations, this PDF can be merged with a second document and the resulting page count should equal the sum.
