DocuScan Pro Test Build Overview

Version 7.75.0 Test Build 1
Build 7.75.0-test1
Built 2026-11-08T16:13:52.969848+00:00

This complete test package includes the application, sample files, updated Help and UI reference workbooks, manuals, automated scripts and test evidence. It is intended for hands-on device testing before a public release.

Studio

Import or capture pages, improve images, scan text, and create a PDF. OCR shows loading and recognition progress. Creating a PDF saves it to Library; Download is a separate device copy.

Sign

Add text, signatures, dates, markup and watermarks. Text is placed once on the preview after you select the tool. Undo and Redo restore the object state.

PDF Tools

Use the categories for page changes, annotation, extraction, existing form fields and other operations. Text and checkbox values are saved as interactive PDF fields.

Library

Choose an action, select files, and confirm. Folders, naming and move choices use app dialogs. Backups and restores are manual; there is no automatic sync.

Test coverage

Desktop and mobile viewport workflow checks passed. Generated OCR scoring tests and worker-control unit tests are separate from real OCR accuracy. Physical camera, native share and print, accessibility review and remaining feature workflows still require testing.
